

SPRINT WHOLESALE DEDICATED INTERNET SERVICE SM

Sprint Wholesale Dedicated Internet Service helps you profitably market Internet Protocol applications over fast, simple and secure dedicated lines. These applications can encompass a wide variety of data communications, from a dedicated line for Internet access to a full, IP-based enterprise network that links multiple locations.

Give your customers exceptional network quality and reliability by leveraging the data leadership of Sprint as a Tier 1 provider with its own IP backbone. Sprint Wholesale Dedicated IP Service offers access options ranging from fractional T1 to OC48 (available speeds vary by location). All Sprint Wholesale IP services are turn-key, meaning you can avoid making large investments in networking hardware and software.

Features

With Sprint Wholesale Dedicated Internet Service, you can give your customers a complete solution for their Internet and private IP communications.

- ▶ Gateways to Sprint frame relay and Sprint ATM networks: Sprint Wholesale also offers bundled frame relay and Dedicated IP services to meet the needs of enterprise customers
- ▶ IP address registration and primary and secondary Domain Name Service (DNS)
- ▶ Nationwide SONET network that offers millisecond service restoral for unsurpassed reliability and survivability
- ▶ 24 x 7 network management: Sprint's Internet Service Center (ISC) manages IP services with state-of-the-art equipment and experts in data transmission and network security
- ▶ Customer access options from fractional T1 to OC48 (depending on local availability). Choose from Sprint-provided or customer-provided access arrangements and OCN circuits
- ▶ Burstable IP service allows customers to transfer data in high-volume "bursts" without paying for maximum bandwidth during slow times.

Sprint Wholesale

Benefits

Sprint Wholesale Dedicated Internet Service gives you these significant advantages:

- ▶ Offer your customers a spectrum of high-value Internet capabilities easily and profitably, without purchasing expensive hardware and software
- ▶ Help customers take their businesses global with international IP service
- ▶ Leverage the quality of Sprint Wholesale data services to cross-sell voice services
- ▶ Enjoy one-stop shopping for Internet registration, transport, equipment and maintenance
- ▶ Assure reliability for your customers with redundant routing equipment, nationwide circuits and 24 x 7 network management

Applications

Sprint Wholesale Dedicated Internet Service supports a broad range of data applications:

- ▶ Web Server Connectivity to the Internet: E-commerce applications and Web content delivery are vital strategies for many businesses. Sprint Wholesale Dedicated Internet Service allow you to directly connect a customer's application and content servers to the Internet for increased performance.
- ▶ Intranets: Business customers are increasingly choosing IP as the foundation for their internal networks. With Sprint Wholesale Dedicated Internet Service, you can connect a customer's remote sites to each other and to headquarters for a private and secure intranet.
- ▶ Internet service provider (ISP): Many resellers and CLECs have become ISPs to capture a greater share of a customer's communications budget. Sprint Wholesale Dedicated Internet Service enables you to deliver Internet access quickly and easily, at a competitive price and without a large capital investment.

Availability

- ▶ Domestic: available at 18 Sprint backbone sites and more than 320 Sprint points of presence.
- ▶ International: currently accessible via local access ports in more than 30 cities worldwide. Direct international connectivity to over 170 countries. By the end of 2001, available via Sprint-owned IP nodes in 15 European and Asian cities.
