## International Outbound Voice Services

---

### Enhance your core services for new profitability

International outbound voice services from Sprint Wholesale can enable you to capture new revenues from your customers' global calling. With dedicated connections in over 300 countries and locations worldwide, Sprint Wholesale can help you to quickly and easily extend the reach of your voice services.

Tailored pricing plans for outbound voice services meet the international calling patterns and requirements of your customers. Sprint Wholesale offers the capability to bill calls based on city codes or country codes, which can increase your pricing flexibility and competitiveness.

A choice of dedicated or switched services and enhanced routing capabilities support the different needs of both facilities-based and switchless operations.

- Switched outbound is a high-quality, long-distance service designed specifically for providers who do not maintain their own switches.
- Dedicated outbound is a flexible, cost-effective voice service for facilities-based providers. Calls originate via dedicated T1 links between your switch and a Sprint point-of-presence (POP).

- Dedicated outbound extension enables you to bring the advantages of the Sprint dedicated outbound calling directly to your customers. Calls originate via dedicated facilities between your customer's location and a Sprint POP.

The account codes feature is available for all Sprint Wholesale International Outbound Voice services, which can give your customers improved security and simplified cost management. A customer-defined code of up to five digits can be entered for each call to track costs by client, project, employee, department or other accounting group. Account codes can be accepted as entered by the caller or validated by Sprint to reduce unauthorized calling.

Outbound services include Sprint Wholesale Carrier Transport<sup>SM</sup>, a powerful invoicing and management reporting platform that can make it easy to create and analyze reports for all Sprint services and locations. You can manage Sprint Wholesale International Outbound Voice services with the Sprint DeskTop Manager<sup>SM</sup> and Sprint Wholesale InfoLink<sup>SM</sup> products.

### Features

Sprint Wholesale International Outbound Voice services offer numerous features that enhance long-distance calls for you and your customers.

One Sprint. Many Solutions.™

### Switched Outbound Services

- Support basic 1+, virtual-banded service origination from domestic equal access areas using existing business lines
- Provide automatic number identification (ANI) information; ANIs are provisioned via Feature Group D (FGD) switched access from your customer's premises through the LEC's central office to the Sprint network

### Dedicated Outbound and Dedicated Outbound Extension Services

- End-to-end digital connectivity with C7 and SS7 signaling available
- Customer-provided or Sprint-provided access
- FANTM service supports outbound and toll-free services over the same trunk group
- Integrated T1 access partitioning (ITAP) combines outbound, toll-free, private line and data traffic on the same T1

### Two Types of Accounting Codes

- With basic codes, Sprint authorizes the call based on the number of digits dialed
- With advanced codes, Sprint blocks the call unless the caller enters an approved code
- Up to 5,000 advanced codes are available per dedicated access line

### Benefits

Sprint Wholesale International Outbound Voice services can bring notable advantages to your business.

- Increase revenues with outstanding network quality
- Expand market presence without investing in your own facilities
- Offer customers a choice of outbound services with options for flexible cost accounting and billing
- Decrease costs for customer care with reduced network problems and automated tools such as Sprint DeskTop Manager
- Improve customer satisfaction through fewer repair requests and faster service provisioning with Sprint Wholesale InfoLink
- Increase cash flow by gaining greater equipment efficiencies through enhanced call routing capabilities

### Availability

For all services, calls can terminate virtually anywhere in the United States and Canada, the Caribbean and to direct-dial international countries.

- Switched outbound service can originate over the Sprint network and Feature Group D (FGD) access facilities from any domestic equal access area
- Dedicated outbound and outbound extension services can originate virtually anywhere in the United States except Alaska
